**Testimonial for Rong Feng**
**National High School Game Academy**
**5 August 2025**

Dear Rong Feng,

This letter affirms that Rong Feng completed the National High School Game Academy in 2025. This six-week program was hosted by Carnegie Mellon University's Entertainment Technology Center from mid-June through early August.

The program began with two weeks of foundational classes in game design, art, programming, sound design, production, and narrative. Following these classes, students were assigned to specialized roles for two collaborative teams, building two separate games over four intense weeks. The two games were built using the Unity Game Engine, Maya 3D, and various Adobe Creative Cloud tools. The curriculum delivered instruction over a range of topics, including the use of game development tools for scripting, image manipulation, 3D modeling, sound editing, and version control.

In the first collaborative project (called the lightning round), teams developed a unique, updated spin on a classic video game. Rong's team worked on *Drillage*. Rong contributed to their team as an artist, performing excellently. This project acted as a dry run for their skills in collaboration and time management.

For the final project, Rong's team created a mesmerizing game called *Pentamania*. It was an alchemy-themed VR sandbox where players dive into potion-making experiments in a dark and fantastic quest to summon the ultimate eldritch being: Cthulhu. The team executed it excellently and created an excellent game. Rong applied herself to fine-tuning the lighting and post-processing in the game admirably.

The core teaching of the NHSGA is an emphasis on ego-less collaboration, building upon the contributions of others, and accepting constructive feedback. The feedback Rong received from teammates was very positive. Regarding their specific contributions to the project as a producer and an artist, teammates rated Rong as outstanding.

The curriculum encourages public speaking and presentation skills of each student. Each student was required to pitch game concepts, give interim progress updates, and demonstrate the final product to a large audience of family, faculty, industry professionals, and peers. Throughout the course, Rong was a confident public speaker.

Delivery of assigned homework is a crucial aspect of learning at the NHSGA, especially as a demonstration of the student's organization and discipline. Rong received approximately 17 homework assignments over the three weeks of class, completing all of them and turning in work with diligent organization.

Rong's mentor provided the following commentary about the student's growth and development over the course of the National High School Game Academy:

*Rong showed remarkable dedication to the craft. Over the course of the project, she made memorable fictional worlds complete with vivid images. She was very proactive in seeking help when she struggled with image-making techniques that were unfamiliar to her, and when she did, her passion for knowledge was apparent. She applied the same eagerness to learn how to be a good producer, resulting in her being much appreciated by her teammates.*

We hope this experience will be reflected upon as a transformative and necessary step in their academic career. Our staff wishes the best for Rong as they continue to develop their skills and passions.

Sincerely,

**G. Christopher Klug**
